Tom Beard Company introduces our new innovative **TBC 2-BARREL AND TBC 4-BARREL COMBO WASHER AND STEAMER**. The machine is a safe and efficient way to wash and steam barrels without moving barrels from machine to machine. It is a stand-alone unit that delivers measured amounts of washing and steam to the barrels. After the wash cycle is complete it shifts the barrels into the steam position. It automatically inserts the bung to establish a vacuum for an adjustable time period and monitors vacuum in the barrel to reduce possibility of damage to barrels. The machine is loaded by forklift and operates via a programmable controller. There is no need for workers to be in the vicinity of the steam at any time.

The model **TBC 2-BARREL AND TBC 4-BARREL COMBO WASHER AND STEAMER** are compatible with most standard 2-barrels or 4-barrel racks. TBC barrel washing machines have been reliably in service worldwide since 1983. All TBC products come with a full one-year warranty and are backed with our dedicated service and parts support.

STANDARD FEATURES:

- All stainless steel construction
- Load and unload on racks via forklift
- Integral Roller Assembly for easy bunghole alignment
- Programmable to minimize water consumption and maximize cleaning efficiency
- Certified NEMA 4X Electrical Components
- Ozone capable and compatible
- Portable
